In 2015, Microsoft announced that it was developing a game-creation platform called Project xCloud. Roblox Corporation conceived of the idea as well, and created the original Roblox in 2004 as a means of creating and sharing single-player game content. Roblox users can create their own games and play them with friends in various game modes. Microsoft launched Project xCloud in June 2019, a cloud-hosted service that allows users to download Roblox games onto their personal computers or mobile devices. Microsoft described Project xCloud as part of its vision to make PC gaming accessible for everyone, including the many people who do not own PCs. Roblox Architecture: Roblox uses a server-client architecture. Roblox's server hosts and manages data and processes requested by its clients, which are program-based components, including servers and clients. The server is the main software component that is responsible for returning the requested data and services. The server also contains its own local runtime environment that is used for hosting and running the client program. Roblox Clients: ROBUX is in-game currency. Users can purchase ROBUX with real-world money. ROBUX are used to unlock special items and purchase premium content. These items include ROBUX booster packs and level packs. They are non-transferable and non-refundable. Roblox xCloud: Roblox Corporation launched the Roblox Experience and Roblox Studio in 2018. They are cross-platform software tools that allow users to build and play games in the Roblox Studio. The Roblox Experience is the Roblox website and the Roblox Studio is a gaming platform designed to deliver the same experience in a standalone installation. Roblox Studio is a software development platform for the creation of games, including simulators, virtual worlds, augmented reality games, and educational software. It allows users to create games and/or apps that can be programmed with one of the many programming languages that are supported by the platform, including Lua, C# and Java. The software also allows these developers to visualize and edit their projects as well as test them before they are published. Users also have access to in-game tutorial tools that help them create games for Roblox. Developer Platforms: Roblox Corporation is currently developing an application programming interface (API) for content creators that enables them to add third-party programming functionality into their projects.
