

OPTIMIZE COMFORT AND ENERGY WITH SINGLE ROOM HEAT RECOVERY

ENERGY SAVINGS

A **single room heat recovery system** captures up to 90% of the heat from outgoing air and uses it to warm incoming air. This reduces heating costs while maintaining a comfortable temperature all year round.

FRESH AIR

Enjoy a continuous supply of fresh, filtered air without the discomfort of cold drafts. The system ensures proper ventilation while keeping your room cozy and free from outdoor pollutants.

EASY INSTALLATION

Designed for individual rooms, these compact units are easy to install, requiring minimal disruption to your home. They are ideal for bedrooms, home offices, or any space needing better air quality.

IMPROVE AIR QUALITY

With built-in filters, a single-room heat recovery system removes dust, allergens, and odors from the air, creating a healthier environment. It's perfect for those who suffer from allergies or want a cleaner living space.
